It is a regrettable fact that cybercrime is on the rise both in terms of morbidity and complexity. Hackers, for a variety of reasons ranging from simple evils to committing crimes, cost the world e-commerce billions of dollars a year. In fact, a report released earlier this year puts the annual cost of cybercrime at $600 billion U.S. dollars. Obviously, there is a demand for people who can outsmart cyber criminals. The best way to thwart criminal hackers is to make ethical hackers (aka White Hat hackers) against them. These ethical hackers, armed with the same skills and savvy as their unethical counterparts, are in high demand. The digital world needs heroes, but these heroes need training before they laugh with crime. To this end, there are certified ethical courses offered by hackers to teach these promising white hats, courses that culminate with the CEH certification exam. This exam is the final piece of the puzzle, a necessary element for those who want a career in professional ethical hacking. But many people find that the test is challenging and is notoriously difficult. Wouldn't it be nice to have a resource to help aspiring ethical hackers to pass the exam, something that gives a fair advantage? Fortunately, that's what we're here for. We are here to tell you how best to prepare and clear the CEH v10 exam. Read on and be on your way to acing this important test. What does the CEH exam entail? The first step in getting ready for the CEH exam (or, indeed, for any exam, for that matter) is to get an idea of what you will be up against that you are facing. With that in mind, here's what a certified ethical hacking exam consists of. The entry-level certification test consists of 125 questions, all of which have multiple choices. The grade required to obtain certification depends on the exam itself. Some exams will score an accurate pass score as a percentage of the required percentage. On the other hand, some of the passing exam scores are based on the knowledge and skills required to demonstrate competence in the subject and the complexity of the questions that are delivered to the candidate. The actual reduction score (the number of items that need to be answered correctly) is based on the input of a group of subject experts who consider the complexity of questions regarding the expected skills of the target audience. As a result, the number of subjects you need to answer correctly varies depending on the complexity of the questions asked during the exam. This ensures that no matter what combination of elements you see, the skill score is fair. If you see a more complex set of questions, the number of correct answers needed to pass is less than if you see a simpler set of questions. Because the number of correct answers needed to pass varies from the complexity of the questions posed, if you see a difficult mix of questions, your performance may actually be higher relative to the passing standard, even if you answered fewer questions questions in other words, a lower percentage) is correct than if you saw a simpler set of questions. However, the good news is that multiple options for questions are easier to answer than questions that await full, written answers, or even worse, essays! So while you will most likely have the time it takes to answer questions, there is still a question about knowing that you will be tested and be prepared for it. The CEH exam tests your knowledge in 19 different areas. These domains cover all aspects of CEH, such as server hacking, penetration testing, trojans and backdoors, viruses and worms, and of course the basics of ethical hacking, to name a few. Here is a preliminary breakdown of CEH v10 by section: Section I: Background -5 Issues Section II: Analysis/Assessment -16 Issues Section III: Security -31 Issues Section IV: Tools, Systems and Programs -40 Issues Section V: Procedures and Methodology -25 Issues Section VI: Regulation and Policy -5 Issues Section VII: Ethics -3 Issues Now that you have an idea of what the exam entails, let's look at the question of how to prepare and clear the CEH exam. Before cooking: Right! But the first thing to do. Before you even get to the point of preparing for the exam you need to make sure that you meet the requirements for passing the CEH exam first. Otherwise, you are just spinning your wheels. First, you must prove to the EC-Council that you have at least two years of information security experience, as well as an education that demonstrates a specialization in information security. And of course, don't forget the CEH exam cost $100 USD. By the way, there's another, much better way to ensure your eligibility, but we'll be covering that later, near the end. Stay tuned! Start: Study! When it comes to preparing for a CEH exam, you should do your due diligence in your research, and nothing beats starting with preparing the right way than going straight to the source of the help. The EC-Council website is filled with many useful resources, such as frequently asked CEH questions, CEH certificate reference reading, exam breakdown, and more. Check them out and then branch out. Get a guide to studying The Preparation for the CEH exam means getting to know the certified ethical hacking certification in general. To do this you need a training guide, and there are many of them out there to choose from. If you want a good springboard, a specific recommendation, then this guide will give you a complete complete picture of the CEH certification process, including a pre-made training plan. The e-book details the history of ethical hacking, the CEH payroll report, the prerequisites for certification, and the eligibility requirements and the above-mentioned study plan. But no matter what guide you choose, make sure you don't this step! Joining the Forum Total load is a lighter load. There are a lot of CEH forums and blogs out there, with people who have the same interests and goals as you, with many of them eager to be Ceh certified as well. Many people on these forums have taken (or are preparing to take) the exam and have tips and strategies to share as well as general tips and ideas. You can also choose the brains of fellow CEH students and professionals, and in the process discover where each other's strengths and weaknesses lie, thereby helping everyone narrow down where their knowledge might be a little light. One person's strength can be another person's weakness, and by communicating through a forum, knowledge is passed on to someone who needs it, while the one who has it manages to reinforce what they already know (repetition does wonders for retention!). Once you have identified the area where you need more work, you can move on to the next step... Create a checklist of studies Once you have discovered what gaps exist in your knowledge of the hacker, you should create a checklist of research topics, prioritizing specific ones that require more attention. Keep in mind that you should make sure to still devote some time to researching topics that you already know; It never hurts to strengthen and refresh your knowledge a little. However, priority must, of course, be to address any gaps in knowledge and then to a later review. Here's a list of topics you can expect to find covered in CEH. Countermeasures: Access Points for Infiltration (Risk Assessment) Cryptography Current Security Laws and Industry Security Standards Monitors Network Security: List of Firewalls Trace IDSs Reconnaissance Scanning Session Hijacking Sniffing Social Engineering SSL TCP Handshake Threats: DDoS-Attacks Hacking in the Cloud Heartbleed Latest Trojans and Viruses Latest Phishing Schemes Latest Mobile Hacking Tools Security Problems in Windows Shellshock Sniffers S'L Injection Types of Malware Practice Makes Perfect If You Want to avoid unpleasant surprises when passing the CEH exam, then consider taking a practical exam or two. They are easy to find online, and the EC-Council website has several of them. Note that this particular step should not be taken until you have already done a lot of research and preparatory work, taking care of any knowledge gaps. Warning: there have been cases where some people have posted some of the CEH v9 issues online. Keep in mind that the EC-Council is aware of this practice and has updated the questions (hence their deployment of the new version, v10). Stay on straight and narrow, and don't fall under short cuts like this! The things you see online won't be exactly the same things you see on the CEH test. Want more help? We mentioned earlier on the best way to secure the right CEH, and that's where your patience pays off! Of course you can get in. papers and red tape to check your eligibility to take the ceH test, or you could take the course and fast track your way to the exam!
