No.1 585.643.3717 info@qualitrolcorp.com Get a quote A patented mechanical device to detect sudden pressure events based on the speed of increased pressure and safe restrictions imposed by transformer manufacturers. When a dangerous increase in pressure has been detected, the relay of rapid increase in the pressure of the qualitrol (RPRR) will change the state. This can be used as an alarm or trip to minimize the potential damage to the transformer tank. FeaturesModels is designed for use in oil or gas space100% checked at the rate of release of pressureprotection rate and detection of dangerous sudden changes in pressureDevices calibrated for rapid alarm or travel during a rapid increase in pressure changeActualation occurs only on the basis of the rate of increase in pressure and will not occur at normal pressure fluctuations, caused by temperature change and vibration may be exposed to a full vacuum or 20 psi positive pressure without damageSorciated operation from -40 to 180 degrees Fahrenheit (-40 to 82 degrees Celsius)Special units are available to operate in - 67F (-55C)100% plant calibrated and tested to ensure performance is metified serialized and calibration records are maintained On the performance of the switch (contact) and answerField test kit is available for a simple GO/NO-NO-GO test to ensure the proper functionality of the deviceMultiple mounting and calibration options for gas or oil applicationsFlang or carving mounting options available for vertical or horizontal installationModels calibrated for proper response in gas or oil space applications From the original creator of mechanical rapid pressure increase relays Mechanical detection of rapid pressure increase In 25 years of experience and refinement in rapid pressure growth protection with more than 100,000 units installed OptionsHorizontal or vertical mountingSeal in the relay (QUALITROL 909) to fix alarm or travel signalElectricity types of connection, The size of the cable, the length and wire colorsGas bleed systemField test kit (KIT-013) and factory test fixture (FIX-601)Flange or thread mountingStainless steel created with a sketch. AppsFor the protection of transformer and other electrical devices. The device sends an alarm when there is a dangerous state of a sharp increase in pressure. This alarm can be used to travel the transformer offline to prevent further damage or purely as an event indicator. Kvalitrol RPRR has been built on more than 25 years of experience and refinement in rapid pressure enhancement protection with over 100,000 units installed. A rapid increase in relay pressure offer a quick reaction to protect the transformer. Unlike other sudden pressure protection devices, the KVR servers of Kvalitrol operate in the oil or gas space for optimal pressure detection.100% The plant is calibrated and tested to ensure performanceCaik's other block of Kvalitrol RPRR serialized and calibration test results calibration They are also checked for switch performance (contact) and response time. To provide additional certainty, Kvalitrol provides a field test kit for a simple GO/NO-GO test to ensure the device's proper functionality in the field. RPRR qualifier is a reliable preventive measure to protect transformers from further damage. Here you can find product guides for various qualitrol products. Most guides are available in several languages. Make sure to check back often as more are added all the time.
